

MUHAMMAD THOUFEEQ

Backend Developer

+91 8921977690 | connectthoufee@gmail.com | [linkedin](#) | [LeetCode](#) | [GitHub](#)

CAREER SUMMARY

Self-taught Backend Developer with experience maintaining production-grade applications using **Golang**. Skilled in building **RESTful APIs** and **microservices** with **Gin**, **Fiber**, **GORM**, and **SQL/NoSQL** databases. Familiar with microservices architecture, **gRPC**, and **GraphQL**, with a focus on writing clean, maintainable, and scalable code.

SKILLS

Languages: Golang, JavaScript, SQL

Frameworks & Libraries: Gin, Fiber, React, GORM, Ent, gRPC, GraphQL

Databases: MySQL, PostgreSQL, MongoDB, Redis

Tools & Platforms: Docker, Kubernetes, Git, Gitlab, Nats, Postman, Figma, Twilio

Concepts: RESTful APIs, Microservices, Clean Architecture, Kafka, CI/CD Pipeline, Cron Jobs

Project Management & Collaboration: Jira, Notion

WORK EXPERIENCE

Software Developer

Nov 2025 - Present

TathkarahIndia - Kochi, Kerala, India

- Maintained and enhanced an existing production-grade application using **Golang** and the **Fiber** framework.
- Worked within a **microservices architecture**, contributing to service development and system scalability.
- Utilized **NATS** and **Go Micro** for inter-service communication and asynchronous messaging.
- Managed and optimized databases including **PostgreSQL** and **MongoDB**.
- Developed and improved console-side features to support business operations and user management.
- Collaborated closely with **frontend** and **QA** teams to ensure seamless integration and reliable releases.
- Used **GitLab** for version control, code reviews, and **CI/CD** workflows.
- Troubleshoot, debugged, and resolved production issues to improve system stability and performance.

Golang Intern

Jan 2025 - Oct 2025

Bridgeon Solutions - Kochi, Kerala, India

- Built scalable RESTful APIs using **Golang**, **Gin**, and **GORM**, following MVC architecture for clean, maintainable code.
- Optimized SQL databases and integrated **Redis** for caching and token management.
- Applied **microservices**, clean architecture, **gRPC**, **GraphQL**, and Agile tools like Jira to enhance scalability and team collaboration.
- Contributed to real-world projects, delivering solutions that address practical business challenges and improve system efficiency.

PROJECTS

ZipRide – Ride-Hailing Platform

Tech Stack: Golang, Gin, GORM, PostgreSQL, Redis, Kafka, Cron Jobs, Docker, Kubernetes, WebSocket, REST, React (frontend)

Github: https://github.com/thoufeeq/Zip_Ride

- Developed a microservices-based ride-hailing platform that connects users with drivers for car, rickshaw, and bike taxi bookings.
- Implemented JWT and Google authentication, OTP-based mobile verification, and integrated PhonePe payment gateway for secure and seamless transactions.
- Built real-time features such as ride status updates, driver-user chat, in-app calling, and notifications using WebSocket, Redis, and Kafka.
- Designed and managed driver and admin dashboards for bookings, driver management, and system monitoring.

- Deployed services using Docker and Kubernetes with the database hosted on Railway for scalability.
- Implemented ACL-based access control in the admin dashboard for role-based permissions.
- Developed a subscription plan system with automated validity checks using cron jobs.
- Added dynamic commission calculation for admins and drivers to handle flexible revenue models.
- Integrated map services for real-time ride tracking and distance-based fare estimation.
- Collaborated in a team of 2 backend (Go) and 2 frontend (React) developers, following Agile workflows with Git and Jira for version control and task management.

Gadfix — Electronic Repair Service Platform

Tech Stack: Golang, Gin, GORM, MySQL, JWT, Bcrypt, Redis, Docker

GitHub: <https://github.com/thoufeeee/Gadfix>

- Engineered the backend for a seamless device repair booking platform, supporting user, staff, and admin roles.
- Designed secure, stateless authentication flows with JWT and Bcrypt, enforcing granular access with role-based control.
- Built RESTful APIs for user onboarding, service catalog, dynamic service booking, and real-time status updates.
- Integrated Redis for efficient session and token management; containerized the service using Docker for portable deployments.
- Built an admin dashboard to manage users, bookings, staff, and simulate payments.
- Implemented robust error handling and logging to support reliable platform monitoring and rapid incident resolution.

EDUCATION

Bachelor of Arts

Kerala University
